
Stereo Analog to Digital Features

- ◆ 91 dB Dynamic Range (A-wtd)
- ◆ -85 dB THD+N
- ◆ Independent ADC Channel Control
- ◆ 2:1 Stereo Analog Input MUX
- ◆ Stereo Line Input
 - Shared Pseudo-differential Reference Input
- ◆ Dual Analog MIC Inputs
 - Pseudo-diff. or Single-ended
 - Two, Independent, Programmable, Low-noise, MIC Bias Outputs
 - MIC Short Detect to Support Headset Button
- ◆ Analog Programmable Gain Amplifier (PGA) (+12 to -6 dB in 0.5 dB steps)
- ◆ +10 dB or +20 dB Analog MIC Boost in Addition to PGA Gain Settings
- ◆ Programmable Automatic Level Control (ALC)
 - Noise Gate for Noise Suppression
 - Progr. Threshold & Attack/Release Rates

Dual Digital Microphone Interface

- ◆ Programable Clock Rate
 - Integer Divide by 2 or 4 of Internal MCLK

Stereo DAC to Headphone Amplifier

- ◆ 94 dB Dynamic Range (A-wtd)
- ◆ -81 dB THD+N into 32 Ω
- ◆ Integrated Step-down/Inverting Charge Pump
- ◆ Class H Amplifier - Automatic Supply Adj.
 - High Efficiency
 - Low EMI
- ◆ Pseudo-differential Ground-centered Outputs
- ◆ High HP Power Output at -70/-81 dB THD+N
 - 2 x 17/8.5 mW into 16/32 Ω @ 1.8 V
- ◆ Pop and Click Suppression
- ◆ Analog Vol. Ctl. (+12 to -50 dB in 1 dB steps; to -76 dB in 2 dB steps) with Zero-cross Trans.
- ◆ Digital Vol. Ctl. (+12 to -102 dB in 0.5 dB steps) with Soft-ramp Transitions
- ◆ Programmable Peak-detect and Limiter

Stereo DAC to Line Outputs

- ◆ 97 dB Dynamic Range (A-wtd)
- ◆ -86 dB THD+N
- ◆ Class-H Amplifier
- ◆ Pseudo-differential Ground-centered Outputs
- ◆ 1 V_{RMS} Line Output @ 1.8 V
- ◆ Pop and Click Suppression

- ◆ Analog Vol. Ctl. (+12 to -50 dB in 1 dB steps; to -76 dB in 2 dB steps) with Zero-cross Trans.
- ◆ Digital Vol. Ctl. (+12 to -102 dB in 0.5 dB steps) with Soft-ramp Transitions
- ◆ Programmable Peak-detect and Limiter

Mono DAC to Ear Speaker Amplifier

- ◆ High Power Output at -70 dB (0.032%) THD+N
 - 45 mW into 16 Ω @ 1.8 V
- ◆ Pop and Click Suppression
- ◆ Digital Vol. Ctl. (+12 to -102 dB in 0.5 dB steps) with Soft-ramp Transitions
- ◆ Programmable Peak-detect and Limiter

Mono DAC to Speakerphone Amplifier

- ◆ High Output Power at $\leq 1\%$ THD+N
 - 1.18/0.84/0.66 W into 8 Ω @ 5.0/4.2/3.7 V
- ◆ Direct Battery-powered Operation
- ◆ Pop and Click Suppression
- ◆ Digital Vol. Ctl. (+12 to -102 dB in 0.5 dB steps) with Soft-ramp Transitions
- ◆ Programmable Peak-detect and Limiter

Mono DAC to Speakerph. Line Output

- ◆ 84 dB Dynamic Range (A-wtd)
- ◆ -75 dB THD+N
- ◆ High Voltage (1.53 V_{RMS} @ V_A = 1.8 V, V_P = 3.7 V) Line Output to Ensure Maximum Output from a Wide Variety of External Amplifiers
- ◆ Pop and Click Suppression
- ◆ Digital Vol. Ctl. (+12 to -102 dB in 0.5 dB steps) with Soft-ramp Transitions
- ◆ Programmable Peak-detect and Limiter

Serial Ports

- ◆ Three Independent Serial Ports: Auxiliary, Audio, and Voice
- ◆ 8.00, 11.025, 12.00, 16.00, 22.05, 24.00, 32.00, 44.10, and 48.00 kHz Sample Rates
- ◆ All Ports Support Master or Slave Operation with I²S Interface
- ◆ Auxiliary and Voice Ports Support Slave Operation with PCM Interface
- ◆ Auxiliary and Audio Ports are Stereo-Input/Stereo-Output to/from Digital Mixer
- ◆ Voice Port is Mono-Input/Stereo-Output to/from Digital Mixer
- ◆ Integrated Asynch. Sample Rate Converters

General Description

The CS42L73 is a highly integrated, low-power, audio and telephony CODEC for portable applications such as smartphones and ultra mobile personal computers.

The CS42L73 features a **flexible clocking architecture**, allowing the device to utilize reference clock frequencies of 6, 12, 24, 13, 26, 19.2, or 38.4 MHz, or any standard audio master clock. Up to two reference/master clock sources may be connected; either one can be selected to drive the internal clocks and processing rate of the CS42L73. Thus, multiple master clock sources within a system can be dynamically activated and de-activated to minimize system-level power consumption.

Three asynchronous bidirectional serial ports (Auxiliary, Audio, and Voice Serial Ports) support multiple clock domains of various digital audio sources or destinations. Three low-latency, fast-locking, integrated **high-performance asynchronous sample rate converters** synchronize and convert the audio samples to the internal processing rate of the CS42L73.

A stereo line input or two mono (one stereo) microphone (MIC) inputs are routed to a **stereo ADC**. The MIC inputs may be selectively pre-amplified by +10 or +20 dB. Two independent, low-noise MIC bias voltage supplies are also provided. A programmable gain amplifier (PGA) is applied to the inputs before they reach the ADC.

The **stereo input path** that follows the stereo ADC begins with a multiplexer to selectively choose data from a **digital MIC interface**. Following the multiplexer, the data is decimated, selectively DC high-pass filtered, channel-swapped or mono-to-stereo routed (fanned-out), and volume adjusted or muted. The volume levels can be automatically adjusted via a programmable Automatic Level Control (ALC) and noise gate.

A **digital mixer** is utilized to mix and route the CS42L73's inputs (analog inputs to ADC, digital MIC, or serial ports) to outputs (DAC-fed amplifiers or serial ports). There is independent attenuation on each mixer input for each output.

The processing along the **output paths** from the digital mixer to the **two stereo DACs** includes volume adjustment and mute control. A peak-detector can be used to automatically adjust the volume levels via a programmable limiter.

The first stereo DAC feeds the **stereo headphone and line output amplifiers**, which are powered from a dedicated positive supply. An integrated **charge pump** provides a negative supply. This allows a ground-centered analog output with a wide signal swing, and eliminates external DC-blocking capacitors while reducing pops and clicks. Tri-level Class-H amplification is utilized to reduce power consumption under low-signal-level conditions. Analog volume controls are provided on the stereo headphone and line outputs.

The second stereo DAC feeds several mono outputs. The left channel of the DAC sources a **mono, differential-drive, speakerphone amplifier** for driving the handset speakerphone. The right channel sources a **mono, differential-drive, earphone amplifier** for driving the handset earphone. The right channel is also routed to a **mono, differential-drive, speakerphone line output**, which may be connected to an external amplifier to implement a stereo speakerphone configuration when it is used in conjunction with the integrated speakerphone amplifier.

The CS42L73 implements **robust power management** to achieve ultra-low power consumption. High granularity in power-down controls allows individual functional blocks to be powered down when unused. The internal low drop-out regulator (LDO) saves power by running the internal digital circuits at half the logic interface supply voltage (VL/2). In a system with an existing high-efficiency supply at VL/2, the internal LDO may be disabled and the digital circuits powered directly by the external VL/2 supply.

A high-speed **I²C control port** interface capable of up to 400 kHz operation facilitates register programming.

The CS42L73 is available in space-saving 64-ball WLCSP and 65-ball FBGA packages for the commercial (-40° to +85° C) grade.

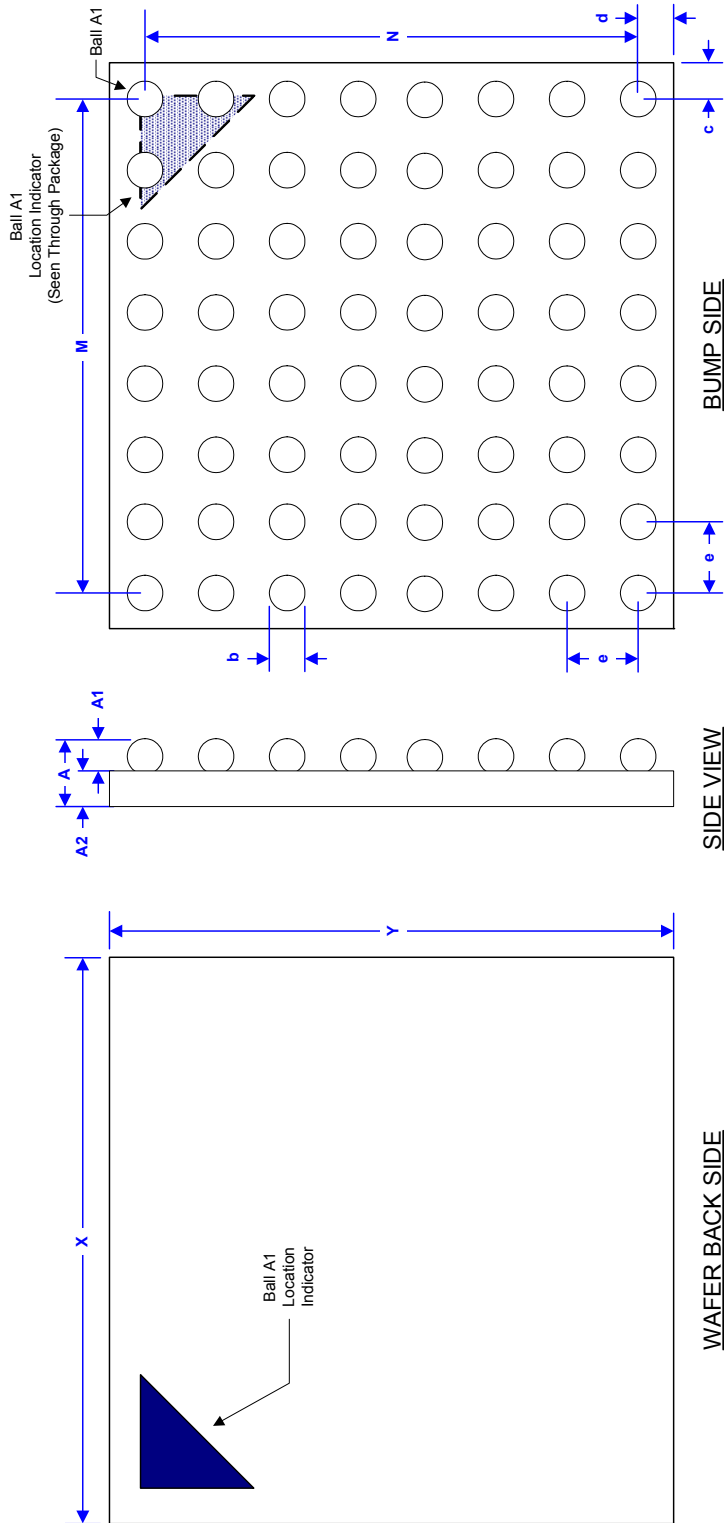

1. TYPICAL CONNECTION DIAGRAM

2. PACKAGE DIMENSIONS

2.1 WLCSP Package

64 Ball WLCSP (3.44 x 3.44 mm Body) Package Drawing

Notes:

1. Controlling dimensions are in millimeters.
2. Dimensioning and tolerances per ASME Y 14.5M-1994.
3. Dimension "b" applies to the solder sphere diameter and is measured at the midpoint between the package body and the seating plane.
4. Unless otherwise specified, tolerances are: Linear ± 0.05 mm, Angular $\pm 1^\circ$.

Dim	MILLIMETERS		
	MIN	NOM	MAX
A	0.450	0.505	0.560
A1	0.170	0.200	0.230
A2	0.280	0.305	0.330
M	-	2.800	-
N	-	2.800	-
b	0.230	0.260	0.290
c	-	0.320	-
d	-	0.320	-
e	-	0.400	-
X	3.415	3.440	3.465
Y	3.415	3.440	3.465

Controlling Dimension is Millimeters.
